Profile

Researcher with a Ph.D in Civil Engineering, specializing in the behavior of organic contaminants and heavy metal removal, utilizing advanced analytical techniques. Expertise in pesticide sorption, degradation, leaching, soil remediation, and water quality assessment, with hands-on experience in high-performance liquid Chromatography (HPLC), Gas Chromatography (GC), and UV-visible spectroscopy. Proficient in water and wastewater treatment, solid waste management, and biochar-based adsorption technologies. Demonstrated ability to tackle complex environmental challenges with innovative solutions, emphasizing sustainability and interdisciplinary collaboration.

Education

2018 – 2024 Warangal, India	Doctor of Philosophy (PhD) in Civil Engineering <i>National Institute of Technology Warangal (NIT Warangal)</i> Title of the Thesis: "Behavior of Pesticides in Agricultural Soils: Assessment and Biochar-Based Control Approach"
2015 – 2017 Warangal, India	M.Tech in Environmental Engineering, <i>National Institute of Technology Warangal (NIT Warangal)</i> Grade: First Class, 7.38/10-point scale Title of the Thesis: "Spatial and Temporal Variation of Groundwater Quality in Warangal City"
2010 – 2014 Haldia, India	B.Tech in Civil Engineering <i>Haldia Institute of Technology</i> Grade: First Class, 8.14/10-point scale Project Work: "Design of 12-Storied Office Building"

Professional Experience

01/2025 – present Warangal, India	Senior Project Scientist <i>Department of Civil Engineering, National Institute of Technology Warangal (NIT Warangal)</i> • Leading NRCO-sponsored environmental assessment and management planning for the Krishna River Basin • Designing and executing field investigations and sampling campaigns for surface water, groundwater, and pollution source identification • Conducting integrated assessment of industrial wastewater and solid waste impacts on river systems • Preparing technical reports and basin management plans aligned with regulatory and sustainability frameworks • Supporting environmental decision-making through data-driven analysis and risk assessment • Coordinating with multidisciplinary stakeholders for project execution
2018 – 2024 Warangal, India	Doctoral Researcher (Ph.D. Scholar) <i>National Institute of Technology, Warangal (NIT Warangal)</i> • Conducted comprehensive assessment of pesticide contamination and its transport in soil-groundwater systems • Evaluated environmental risks associated with contaminant leaching and groundwater pollution • Designed laboratory and field experiments to simulate real-world contamination scenarios • Developed remediation strategies using biochar to reduce contaminant mobility • Performed chemical analysis using HPLC and GC to support environmental monitoring • Contributed to water and soil pollution control frameworks supporting sustainable agricultural practices.
06/2016 – 07/2016 Visakhapatnam, India	Intern <i>Hindustan Petroleum Corporation Limited (HPCL)</i> • Assisted in environmental monitoring and evaluation of industrial wastewater treatment systems • Supported compliance reporting aligned with environmental regulations • Evaluated treatment efficiency and operational performance of ETP systems

Research Experience

2018 – 2024

PhD Research Work

Thesis Title: "Behavior of Pesticides in Agricultural Soils: Assessment and Biochar-Based Control Approach"

Pesticides have become an indispensable component of modern agricultural practices, gaining widespread popularity among farmers as they function as protective shields for crops. Over the past five years, there has been a substantial five-fold increase in pesticide application in the state of Telangana, raising concerns about the preservation of groundwater and surface water resources. To address these concerns, a study was conducted to investigate the fate and behaviour of two widely used pesticides, Imidacloprid and Atrazine, in four different soils within the region. The research aimed to assess their potential to contaminate groundwater using various methodologies. The study revealed that these pesticides are prone to contaminating water sources. In response to these findings, various biochars and hydrochars were prepared as effective measures to control the leaching of pesticides in the soil, and this goal was successfully achieved. The biochars demonstrated the ability to control the mobility of pesticides in soils. This research underscores the importance of implementing strategies to mitigate the environmental impact of pesticide use and emphasises the potential role of biochars in promoting sustainable agricultural practices.

2016 – 2017

M.Tech Research Work

Thesis Title: "Spatial and Temporal Variation of Groundwater Quality in Warangal City"

Groundwater quality was assessed at a total of 23 sample locations over a six-month period. Twelve physicochemical parameters and six different heavy metals were investigated across all samples. Water Quality Index (WQI) was developed for each location to assess its suitability for drinking purposes. The entire region was mapped using ArcGIS to visualize the spatial variation of each parameter, providing insight into the overall quality of the study area. The findings of the study proved valuable to local government authorities for planning water supply initiatives in the area.

Technical Skills

Environmental Engineering:

- Environmental Site Assessment (Phase I & II ESA)
- Soil & Groundwater Contamination Assessment
- Environmental Impact Assessment (EIA)
- Risk Assessment & Regulatory Compliance
- Wastewater Treatment Systems
- Environmental Monitoring & Site Investigation

Analytical & Laboratory:

- HPLC, Gas Chromatography (GC), UV-Vis Spectroscopy
- Organic Contaminant & Heavy Metal Analysis
- Soil & Water Sampling Techniques

Tools & Data:

- ArcGIS, EPANET
- R (Basic), MS Excel
- Data Analysis & Interpretation

Languages

- English
- Bengali
- Hindi
